ABSTRACT

Article to submit, on a training basis, is in the area of the teaching methodology based on the information technologies and communications (ICT) as structured in the aspect of the use of management courses in the subject of financial applications, in order to apply it in the process teaching and learning.

According to the new virtual online learning environments in the course of financial applications I use to coordinate and implement the functionality of the ICT, for offering me the novelty of environments in the training process, free from the constraints imposed by time and space in education classroom and capable of ensuring ongoing virtual communication among students and teachers teaching and learning allow all environments with a broad presence in university education, vocational and occupational where to complement the present teaching with virtual activities and credits online which can be developed at home, in schools or in another physical space has a point of connection to the global network always to make your life more feasible to the human being. The primary objective of this research has been to promote the transformation of the educational process with the use of ICT for better management of knowledge in which integrates technology with education.

Education with technological procedure uses instruments of ICTs, which are essential for the training process, which has various functions, in the most important in the course of financial applications, I use: Database as a source of information.

Interpersonal communication, team work with the exchange of information, voice, video and data with development of ideas through forums and e-mails.

The advantages of the use of ICT within this el interest towards new formats with optimal processes of information technology in conjunction with the virtualization, motivation applied to all the educational context for an excellent result, the interaction of all the elements involved more versatility in the procedures of how dynamics.

The article of an investigative nature on ICT in the subject financial applications, administration of courses, advantages and disadvantages, we realize that at present the use of a tool is indispensable to obtain better excellence in the training process.

No face-to-face format has its advantages with the essence of the time that each day is more limited, and leads to education in the broad and narrow, meaning the development of humanity.

The disadvantages are minimal in relation to the advantages that provide us with both the students and me in the subject financial applications, in which we highlight:

- Distraction
- Inaccurate or unreliable information
- Anxiety and dependence, which can reduce highlighting and applying the positive terms.
- Addiction to technology
- Isolation
